## **Auto Parts Feature**

In this tutorial we will show you how to use the Auto Parts feature and related sections.

First you have to go to Configuration section. Click the Price Algorithm button then adjust how the system will calculate the rates of default sell prices.

To do so, click on the blue "Split" button marked with an arrow to add a new algorithm. You then have to edit its criteria: set the price range to be applied within the algorithm and right margin percentage of the parts' cost.

Once you finish setting up the algorithms, press the green Save button and they be automatically applied. Remember, you can always change the prices if you need.

Also you can configure the parts suppliers list. Leave only your current suppliers and turn off the rest.

Now go back to the main menu and enter Auto Parts section. Press the Inventory button to see the parts and amounts you currently have in stock.

Back on the Auto Parts page you can see how much that part costs and the price you're selling it for. Here you can still adjust the parts price if you do not want to go on with the Price Algorithm generator. Moreover, it is possible to set the Quantity of Notification which will notify when it will be about time to reorder the item.

This allows to track all your incoming parts. Note that not every part goes directly to the Inventory as it can only appear in the vehicle repair. You can purchase the part again if needed though.

At the bottom of the page you can find quick access to the Auto Parts menu as well as order history. You can also use the Reorder button to reorder the part you are currently viewing or create a new order by clicking the relevant button. Once you have made an order, change its status to Paid to define the completed transaction.

Going back we got Parts in Repairs where a list of all the parts currently used in the repairs is available with just one click.
